

Ayrton Porto

Mathematician · Formal Methods · Autoformalization

 ayrporto@gmail.com

 ayrtonporto.github.io

 /ayrtonporto

 /in/ayrporto

Research Interests

Autoformalization, formal verification, large language models for mathematics, proof assistants (Lean 4, Coq/Rocq), mathematical logic, algebraic logic, fidelity metrics for machine-generated proofs.

Education

Universidad Nacional del Centro de la Provincia de Buenos Aires (UNICEN) 2020–2025
Licenciatura en Ciencias Matemáticas — Tandil, Argentina

— GPA: **9.41/10.00**. Five-year degree, equivalent to a combined B.S. + M.S.

— Thesis: *Priestley duality for bounded distributive lattices with normal operators*

— Advisors: W. Zuluaga Botero and A. Nagy

Research Experience

AViD Journal — Automated Verification Pipeline 2025–Present
Independent Research Project — Deployed, in active development (avidjournal.com.ar)

— End-to-end pipeline for LLM-assisted autoformalization of mathematical papers in **Lean 4**, with novelty detection against Mathlib.

— Integrated **arXiv** and **TheoremSearch** for paper ingestion; modular Python backend with FastAPI, SSE streaming, and Claude API.

— Presented as a poster at *Escuela de Primavera en Deep Learning* (2025).

— Source: github.com/ayrtonporto/avid-journal

Apart Research — Secure Program Synthesis Fellowship 2026–Present
Fellow Researcher · International collaboration

— Developing **BabelBench**, a cross-paradigm proof-translation benchmark measuring whether LLMs preserve logical meaning when translating theorems across formal systems (Lean 4, Coq, TLA+, Dafny).

— Leading the fidelity-metrics component: metrics checked by real verifiers and Z3 — no LLM judges.

CIN Scholarship — Consejo Interuniversitario Nacional 2023–2025
Undergraduate Research Fellow · UNICEN

— Research in algebraic logic under W. Zuluaga Botero.

— Studied duality theory for bounded distributive lattices, culminating in the Licenciatura thesis.

Talks & Presentations

An Introduction to Lean 4 — Taller Lean, Nodo Serrano 2026

AViD Journal: LLM-Assisted Autoformalization — Deep Learning Spring School (poster) 2025

Priestley Duality for Bounded Distributive Lattices — Thesis defense, UNICEN 2025

Multivariate Integration via Space-Filling Curves — XII Congreso Mar y Sierras 2023

Teaching Experience

Teaching Assistant — UNICEN <i>Graduate Teaching Assistant</i> Courses: Discrete Mathematics, Linear Algebra, Calculus I.	2026–Present
Teaching Assistant — UNICEN <i>Undergraduate Teaching Assistant</i> Courses: Discrete Mathematics, Linear Algebra, Calculus I.	2023–2025

Awards & Fellowships

Apart Research — Secure Program Synthesis Fellowship	2026
Santander Scholarship — Academic Merit	2024
CIN Scholarship — Consejo Interuniversitario Nacional	2023–2025
IMPA Summer Program — Rio de Janeiro, Brazil	2023
Course: <i>Computação, lógica e teoria dos conjuntos</i> . Grade: A–.	
Honorable Mention — Argentine Mathematical Olympiad (OMA)	2017, 2019

Languages

Spanish (native) · English (professional proficiency) · Portuguese (reading)

Technical Skills

Proof assistants	Lean 4, Coq / Rocq
Programming	Python, C++, SQL
ML / AI	LLM pipelines (Claude API, multi-agent), PyTorch, prompt engineering
Formal methods	Theorem proving, formal verification, model checking (TLA+, Dafny)
Tools	Git, LaTeX, FastAPI, Streamlit, Pandas

References
